TicketMaster Form Filler Bot

Prerequisites:

1. Python 2.7.14
	Please download Python for your operating system and make sure that it is in the path. While installing python, please select the option which says "Add to path". This can be verified by opening command prompt/terminal window and running "python -V". If a version shows up, you can move to the next step.
	Windows:
		https://www.python.org/downloads/windows/
	Mac:
		https://www.python.org/downloads/mac-osx/

2. Mozila Firefox
	Firefox is the preferred browser for these applications as its open source and has great support.

3. Geckodriver
	Download geckodriver and copy the geckodriver executable into the directory where Python was installed. This is usually C:/Python27 on windows.

4. Selenium
	Download selenium using pip. For the instructions, checkout:
		http://selenium-python.readthedocs.io/installation.html

How to use?

To run the program, double click the file "formfiller" or open a terminal/command prompt window in the current directory and run "python formfiller.py".

Notes

In case there are issues with the installation of the program, I can hold a remote session over TeamViewer to resolve them.

If the program needs any modifications or corrections feel free to contact me. I'll get back to you at the earliest.
